

RT problem list (long)

1. Abdominal hernia
2. Acute renal failure superimposed on chronic kidney disease (now stable)
3. Asthma
4. Coronary artery disease (CAD), with history of myocardial infarction (MI)
5. Chronic liver failure (without hepatic coma)
6. Chronic obstructive pulmonary disease (COPD)
7. Chronic post-traumatic stress disorder (PTSD)
8. Cirrhosis of liver
9. Congestive heart failure (HFrEF, and past hypertensive heart disease with heart failure)
10. Type 2 diabetes mellitus (T2DM)
11. Essential hypertension
12. History of deep vein thrombosis (DVT)
13. Hyperkalemia (history of)
14. Hypothyroidism
15. Immunodeficiency due to conditions classified elsewhere
16. Chronic kidney disease (CKD) stage 3–4
17. Liver damage
18. Morbid obesity due to excess calories
19. Myocardial infarction, history of
20. Neuropathy (e.g., diabetic neuropathy)
21. Other hyperlipidemia (includes hyperlipidemia)
22. Pancreatitis, history of
23. Renal failure syndrome (resolved/improved)
24. Seasonal allergies (allergic rhinitis)
25. Obesity, BMI 31→ 40
26. Peripheral edema (trace, bilateral)
27. Exertional dyspnea
28. History of warfarin use (chronic anticoagulation for Afib)
29. Chronic anemia (mild)
30. Gastroesophageal reflux disease (GERD)
31. Chronic lower back pain
32. Benign prostatic hyperplasia (BPH)
33. History of tobacco use (quit)
34. History of alcohol use, currently abstinent
35. Gout (history of episode, no current flares)
36. Osteoarthritis of knees
37. Leg cramps (intermittent, nocturnal)
38. Tinnitus, chronic
39. Cataracts (mild, not surgically treated)
40. Vitamin D deficiency (history of, treated)
41. History of colon polyps (removed 2016)
42. Sleep disturbance (mild)
43. Elevated prostate-specific antigen (PSA, monitored)
44. History of contrast allergy
45. Impaired fasting glucose (if relevant)
46. Vaccination—pneumococcal, up to date
47. Vaccination—influenza, up to date
48. History of heart failure hospitalization (June 2023)
